Project Name : You Never Know 💬

Team Member : Md. Zakaria Hossain(2019331043), Shakil Hiat(2019331089)

Idea :

This is a website for anonymous messaging. In this website a person can generate a link for him and the persons who want to send him messages anonymously have to deliver the messages through the link. Latter he can check the messages but won't get the identity of the person who messages.

Motivation :

Sometimes we want to know what people are thinking about me in my surrounding. But we can't get the real feedback from the people around us because no one want to praise or criticise anyone in his presence. So, we think it's a great idea to build a anonymous messaging website to overcome this.

Basic Features :

- System is totally end to end encryted.
- The Receiver can see the time when the message delivered.
- The link will be refreshed after every 72 hours.
- The number of word in each message shouldn't exceed 120 words.
